

KOOLTRONIC OFFERS NEW RACK MOUNT AIR CONDITIONER

The **Kooltronic RM Series** boasts an innovative design concept allowing installation in any location within a 19" data rack while keeping electronics cool. The key to this flexibility is the evaporator airflow pattern; the new **RM Series** Air Conditioners feature two evaporator air inlets and two outlets on the top and bottom of the unit. By using supplied baffle plates, the air conditioners can easily be field configured for a variety of applications, with the choice of five airflow patterns:

- In addition to airflow variety, the unique design of the **RM Series** eliminates the need for ductwork, freeing up more space in the electronics cabinet.
- Rated at 5000 BTU/H and available in 115 or 230VAC, these air conditioners are an excellent choice for Data Centers, Communications and Telecom applications.
- The **RM Series** is UL Listed, and offers a wide variety of options, including a Temperature Alarm, Internal Corrosion Protection and a Stainless Steel or Aluminum Shell.

With over 60 years of service to its customers, **Kooltronic** is the leading manufacturer of air conditioners, heat exchangers, fans and blowers designed specifically to cool the interior of enclosures containing heat sensitive electrical/electronic components. The company has a complete manufacturing facility and sales office at its headquarters in Pennington, NJ.
