

Advantage Series Filter Fan Mounting Instructions (For Filter Media Replacement Follow Steps 2 & 5)

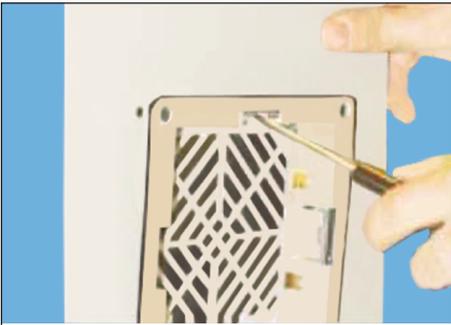

Step 1. Cut the mounting hole where required in the enclosure using the cut-out template shown on the box, respecting the tolerances indicated. If the tolerances are not met, then four holes must be made to fasten the base with screws.

Step 2. Remove the louvered cover and filter media from the base by using a screw driver in the slots provided on the edge of the cover.

Step 3. Insert the base into the mounting hole. Tip the base forward and carefully clamp the fixed hook at the bottom. Note: the positions "TOP" and "BOTTOM" are marked on the base and on the louvered cover.

Step 4. Clamp the elastic hooks (on the two sides and at the top) by pushing at the base. In case of difficulty, snap in by using a screw driver.

Step 5. Put the filter media in the louvered cover (the less dense side of the filter should be facing the air inlet side) and then insert the cover into the base.
